Table Relationships

This Meijer database tracks suppliers, stores, products, customers, and purchases. Each product on the shelves is recorded from a supplier and placed in a store. It also has a category and quantity attached to it. When a product is sold, the store from which it is sold, the customer making the purchase, the time and day, and the amount of each product are recorded into the Purchase and PurchaseDetail tables. All of the tables in the database can be used together to create a product inventory and generate customer trends and sales data for the stores.

Population Scripts

The following are the scripts used to populate the tables with the data.
